Just because a part is on the underbody of a vehicle, does not mean it gets overlooked when it comes to performance quality and design aesthetics. Utilizing our injection molding capabilities, JVIS can customize these panels for any area of a vehicle’s underbody. Designed to improve aerodynamics and shield the underbody parts from the elements and debris, these panels will:

- Improve airflow and performance
- Increase energy efficiency
- Enhance the visual look

As a concept-to-production team, JVIS offers the benefit of molding, assembling, and error proofing to a high-volume product. Contact us today and we’ll help you make your mark in this rapidly growing automotive area.
